ERP Implementation

Construction client looking to implement Microsoft Dynamics AX for its operations

Client Background

1. A construction company was looking to implement Microsoft Dynamics AX to replace its existing Sage MAS 500 implementation. The client was looking to use Dynamics AX to manage it's financials (A/P, A/R, Fixed Assets, Tax and Cash Management, G/L), business and financial reporting, operations (fleet maintenance, job scheduling and tracking) and business intelligence

Client Issue

1. The company recently acquired another construction outfit and was looking to scale.
2. Existing ERP system was not going to provide them with the desired functionality required when they doubled in size.
3. A number of manual workarounds were used for business operations

ERP Implementation

Construction client looking to implement Microsoft Dynamics AX for its operations

Action / EBDS Solution

We assisted the client with the entire implementation of Microsoft Dynamics AX. Our work involved:

1. Business process mapping
2. Diagnostics, analysis, design, and development of the ERP
3. Testing and pilot
4. Go Live, change management and user training
5. Post go-live support and improvements e.g., form and report definition and generation, issue resolution, quality control, integration with other internal applications, etc.
6. On-going support for the application and upgrade services

Impact / Value Delivered

The client successfully implemented Microsoft Dynamics AX. The solution has been running for the last eight months and has provided the company with the results that were anticipated.
