Gemini Cloud Service
Benefits of EBDS' Gemini Cloud Service

Cost-Effective: Make optimal use of your hardware, ensuring that you won't pay for anything you're not utilizing.

Microsoft Cloud OS: Integrate your entire system into the Microsoft ecosystem. Easily migrate between public, private, hybrid and dedicated services as your business changes over time.

Hyper-V: Take advantage of the live migration, monitoring and management features of Hyper-V – as well as the savings.

Secure: Isolation ensures integrity and availability of mission-critical information.

Deployment Speed: Virtual servers can be deployed in minutes, reducing delays in productivity.

Flexibility: Scale up or down to the exact resources you need; connect modern hardware with legacy systems.

Use, Then Close: Spin down VMs, migrate workloads when requirements change – ideal for test environments.

Gemini Cloud Service

Benefits of EBDS' Gemini Cloud Service

Remote management: The hypervisor's separate management layer enables you to control your VMs remotely if your operating systems stalls.

Monitoring: Server metrics (RAM, CPU, HDD) tracking and ping testing included.

Gemini Cloud Service

What sets our Cloud Service apart

1. **Superior Support** from our in-house data center experts 24x7x365

2. **Our dispersed datacenters** in let you choose your preferred location

3. **Hardware Refresh** is handled by us, so you never have to use your resources to update servers or infrastructure

4. **Custom-built** multi-server private clouds

5. **Lower licensing costs** with our cloud service provider

6. **Hybrid hosting option** - connects to managed servers or other cloud environments

7. **Extensive customization** options available
